Take control over Samus Aran like never before!

Your Wii Remote™ becomes the bounty hunter's Beam Cannon as you take aim at alien targets, then grapple objects via motion control. The Corruption comes in the form of power-giving substance Phazon. If you can control it, you'll advance past foes with ease. If you can't, it will consume you. Multiple visors allow you to scan your environment and send commands to your gunship. The Wii™ is primed for first-person adventure—and Samus is poised to bring it, with the best first-person control ever designed.

Facts and Features

- Control Samus by moving with the Nunchuk™ controller and aiming with the Wii Remote controller, allowing for a level of immersion unlike anything they have ever experienced.
- Using the Wii Remote and Nunchuk controllers, grasp and pull things by using actual arm movements, and execute amazing feats like aiming and blasting in midair or at a full run.
- Samus employs well-known power-ups like the Grapple Beam and Morph Ball, as well as new surprises, to help her survive.
- For the first time in the Metroid series, Samus' ship will be used in active game play.
